

CONFERENCE CALL BRIDGE ARRANGEMENT

Abstract of the Disclosure

- 5 A user terminal (10) initiates an internet
protocol using session initiation protocol to
interconnect a number of user terminals (11-13) in a
conference call. Signaling connections (41, 42, and
43) are established between one user terminal and each
10 of the plurality of user terminals. Common bearer
formats are negotiated among the plurality of user
terminals (113). If a common bearer format exists
(115), the conference bridge is established for data
(voice) transmission (127).
